1 Introduction

1.1 Why STREAM

The workforce in the Netherlands is ageing, and a shortage of workers is expected in upcoming years because fewer young people enter the labour market and a large number of baby boomers will retire (1). The rising ratio of retired elderly to the active working population puts pressure on public finances, and causes tension in the solidarity between generations (2). In order to maintain the social welfare state and meet the demands of the global economy, all labour supply needs to be used, work productivity should be maintained at a high level, and sustainable employability should be promoted.

Although an increasing number of studies address sustainable employability in an ageing society, there are several gaps in our knowledge which are primarily due to a lack of longitudinal studies in which a broad set of potential determinants are examined (3). The Study on Transitions in Employment, Ability and Motivation (STREAM) was designed to contribute to filling these gaps, and to provide better insight into the factors that influence transitions in employment and productivity among older workers.

1.2 Objective of STREAM

The objective of STREAM is to acquire knowledge on the circumstances under which persons aged 45 and older continue to participate in paid employment with a high productivity and in good health. This knowledge is necessary for the development of policies and interventions that can improve the sustainable employability of older employees.

1.3 Research framework

In Figure 1 the research framework is presented:

Figure 1.1: STREAM research framework

In the research framework five groups of potential determinants of transitions in employment and work productivity are distinguished. These are health, job characteristics, skills and knowledge, social factors, and financial factors. According to the framework these determinants influence transitions in employment and work productivity through three central explanatory variables, i.e., the ability, motivation, and opportunity to work. All variables in the framework, and their interrelations may be influenced by moderating variables, including gender, age, educational level, and initial employment status (i.e., employed, self-employed or non-employed).

Transitions in employment include: (a) transitions from work to early retirement, unemployment, and disability, (b) transitions from inactivity in the labour market to paid employment, and (c) mobility in the labour market, i.e., transitions to a different employer, transitions to a different occupation, transitions between employment and self-employment. Work productivity refers to the quantity and/or quality of the output that an individual creates. In this study, we focus on several aspects of self-reported productivity, including sickness absence, presenteeism, and loss of productivity while at work.

1.4 Strengths and limitations of STREAM

STREAM is a comprehensive longitudinal study. The strength of longitudinal studies is their capacity to approximate causality. A critical issue in establishing causality is the temporality of the observed association, i.e. the cause precedes the effect in time. Therefore, longitudinal studies collect data which better enable us to disentangle cause and effect than cross sectional studies.

With STREAM we intend to examine relations. STREAM is not suitable for monitoring, meaning we will not make statements about for example the percentage of persons in the Netherlands that retires early. The reason is that we use an internet panel for the data collection and not a representative sample of the Dutch population. Moreover, our sample is stratified, and contains relatively many employees in the age group of 60 to 64. Also, as in all longitudinal studies, not all participants of the first measurement continue to participate during all follow-up measurements.

We assume that the findings in STREAM may be generalized to the Dutch population. Aim is to examine the influence of various determinants on the participation of older persons in work. For that aim, heterogeneity is more important than representativity. In STREAM we aimed at a highly heterogeneous sample in age, sex and education.

The participants of STREAM are all 45 years or older. The study will not contain data on transitions of younger persons and determinants of these transitions. Findings of the present study with regard to determinants may not be generalized to younger persons.

1.5 Ethical approval

The Medical Ethical Committee of the VU University Medical Center (Amsterdam) declared that the Medical Research Involving Human Subjects Act (abbreviation in Dutch: WMO) does not apply to STREAM. The Medical Ethical Committee had no objection to the execution of this research. In the information that accompanied the online questionnaire, it was emphasized that the privacy of participants is guaranteed, that all answers to the questions are treated

confidentially, and that all data are stored in secured computer systems. The letter of the Medical Ethical Committee is in Appendix 1.

TNO has established an internal review board for research involving human subjects that is not subject to the WMO. The TNO Institutional Review Board (IRB) assesses design of the study, social importance, safety aspects, privacy of the participants, data storage and burden and risks to research participants. STREAM received a positive recommendation. The letter is in Appendix 1.

2 Study population

STREAM is a prospective cohort study among employees, self-employed persons, and non-working persons, aged 45 to 64 years at baseline. The study sample was stratified by age and employment status (employed, self-employed, non-working). The baseline measurement was carried out in 2010, with follow-up measurements in 2011, 2012, 2013, 2015, 2016, 2017 and 2019.

STREAM participants were part of the Intomart GfK Online Panel, which consisted of approximately 110,000 persons in 2010, of whom about 35,000 were 45 to 64 years of age. Intomart GfK recruited panel members in various ways: from participants in national representative research carried out by Intomart GfK (33%), through contacts of persons already included in the panel (23%), through newsletters (26%) or banners (2%). Moreover, persons applied for the panel themselves (16%).

In the fifth wave (2015) a new sample was included in STREAM to refill the 45-49 years category. Also new participants were added from the age groups 50-54, 55-59 and 60-64, to ensure a sufficient amount of employees and self-employed persons in these age groups. The new sample was recruited in the same way as the original sample and was also stratified by age and employment status.

Panel members received a financial incentive to fill out an online questionnaire. For every yearly completed STREAM questionnaire, the savings balance of the participant was increased by about 3 euros, with the exact amount depending on the time spent filling out the questionnaire. These savings could be paid out as gift vouchers or as a donation to the Red Cross. In the 2015 wave, the remuneration for filling out the questionnaire was increased after approximately 5 weeks to 6 euros to increase response rates. Since 2016, the remuneration was increased to 5 euros. In STREAM, response by proxy (i.e., someone else in the household) was not allowed.

A special group among the participants are the so called 'inactive' panel participants. Inactive panel participants were no longer active in the GfK panel, but were still approached to take part in the STREAM study. In the measurements of the past years, different fees have been tried to involve the inactive participants, varying from a €5 gift coupon right away, the value of €15 after they finished three measurements, or a lottery where substantially higher amounts could be won. Response rates did not differ much among the different schemes. Since the adoption of the General Data Protection Regulation (GDPR) in 2018, inactive participants could no longer be approached.

2.1 Study population at baseline in 2010

The first measurement took place between the 22nd of October and the 28th of November 2010. A sample of 26,601 persons was invited by Intomart to participate in STREAM. Invited persons received a maximum of two reminders. Of this sample, 4,168 persons did not respond to the invitation, and 2,180 persons started but did not complete the questionnaire. For 5,065 persons, the questionnaire was stopped after a few selection questions because the relevant age / employment status category was already filled. In total, 15,887 participants completed their questionnaires, a response rate of 71,45%. We received 15,118 questionnaires, since it was agreed that Intomart would deliver data of 15,000 persons.

The remaining 699 questionnaires were selected randomly within persons that did not give permission to link their data to register data of Statistics Netherlands (see section 2.1.3). The remaining participants are presented in Table 2.1.

Table 2.1: Participants baseline measurement STREAM in 2010

	Employed	Self-employed	Non-working	Total
45-49 years	3,001	254	482	3,737
50-54 years	3,001	250	520	3,771
55-59 years	3,495	252	526	4,273
60-64 years	2,558	273	506	3,337
Total	12,055	1,029	2,034	15,118

Since the Intomart GfK panel contained insufficient employed persons in the age group 60-64, Intomart has put additional effort in recruiting persons in this stratum; participants were asked to approach persons in this age group to participate and an ad was placed in a magazine. These actions yielded 53 extra participants. Also participants were derived from a panel of a GfK-partner of Intomart, yielding 360 additional participants in this stratum. Unfortunately, these actions did not lead to a sufficient number of participants. Therefore, it was decided to approach more employed persons in the age group 55-59.

2.2 New study sample in 2015

in 2015 a new sample was included in STREAM. Intomart has invited 12,109 persons to participate in STREAM. Of this sample, 4,604 persons did not open the invitation, a response rate of 62%. Another 525 persons did not complete the questionnaire. Of 228 persons the questionnaire stopped because the stratum was already full. After data cleaning another 13 persons were excluded, and in total 6,752 persons could be included in the analysis. Table 2.2 shows the final participants by age group and employment status.

Table 2.2: Participants new sample STREAM in 2015

	Employed	Self-employed	Non-working	Total
45-49 years	3702	282	515	4499
50-54 years	753	67	19	839
55-59 years	630	65	1	696
60-64 years	622	60	0	682
65-69 years	9	3	0	12
Total	5716	477	535	6728

2.3 Study population at follow-up

All follow-up measurements took place in the fall of the following years:

T2	24th of October 2011	-	27 th of November 2011
T3	22nd of October 2012	-	28 th of November 2012
T4	21st of October 2013	-	24 th of November 2013
T5	23rd of October 2015	-	7 th of December 2015
T6	25th of October 2016	-	12 th of December 2016
T7	23rd of October 2017	-	12 th of December 2017
T8	24rd of October 2019	-	2 nd of December 2019

Of the 15,118 persons that participated in 2010, 5,103 persons (34%) completed all questionnaires. Of the new panel, 3,564 persons completed the questionnaire also in the following three years (53%). Figure 2.1 shows a flowchart of the response on all measurements in STREAM. Unattainable refers to persons that resigned from the panel. Intomart is not allowed to approach them for the next measurement.

Figure 2.1: Flowchart of the response; 5,103 participants of the original cohort completed all questionnaires and 3,564 of the new cohort.

2.3.1 Selective loss to follow up of the original panel

To examine possible selective loss to follow up, we compared the respondents who participated in all measurements with those who missed one or more follow up measurements. Table 2.3 shows the results.

Table 2.3: Selective loss to follow up

	Original cohort		New cohort	
	missings	all	Missings	all
N:	10,015	5,103	3,174	3,564
%:	66.2%	33.8%	47.1%	52.9%
Age	53.9▼	55.2▲	49.7∇	50.6Δ
Sex (percentage women)	0.47Δ	0.44∇	0.53Δ	0.50∇
Education	2.19∇	2.22Δ	2.19	2.20
Vitality	64.3∇	65.6Δ	62.5	62.7
Depression	1.57Δ	1.53∇	1.62	1.61
Job demands	3.12Δ	3.06∇	3.19	3.15
Job satisfaction	4.02	4.02	4.03	4.03
Developmental proactivity	3.92Δ	3.87∇	3.89Δ	3.82∇
Financial situation	3.32∇	3.47Δ	3.39∇	3.51Δ
Work ability	7.29	7.36	7.73Δ	7.60∇
Productivity	6.69Δ	6.59∇	6.72	6.69
Intention tot stop working (WN+ZS)	1.39∇	1.47Δ	1.23	1.26
Intention to start working (NW)	2.30	2.19	2.93▲	2.57▼

Note. Means are tested with the t-test. ▲ and ▼ : $p < 0.05$, significant high (low) means (two-tailed), and Cohen's d is at least 0.20. Open arrows Δ and ∇: also significant, but Cohen's d is smaller than 0.20. Cohen, J. (1988). Statistical power analysis for the behavioral sciences (2nd ed.). Hillsdale NJ: Erlbaum.

WN=employed, ZS=self-employed, NW=not employed

Table 2.3 shows some selective loss to follow up. Due to the large sample, differences are statistically significant, but very small. For most variables Cohen's d was smaller than .20¹, apart from age in the original cohort (0.218). One exception is age in the original cohort. Those who participated in all measurements were more than one year older. In the new cohort, those who participated in all measurements and were not employed had less intention to start working. These small effect sizes indicate that the selective loss to follow up will not seriously bias the results of analyses with the STREAM data.

2.3.2 Linkage to register data

In the baseline questionnaire, participants were asked to give their consent to link their answers to register data of Statistics Netherlands. Such linkage enables the attainment of

¹ For Cohen's d an effect size between .20 and .35 may be considered a small effect, while below .20 effect sizes may be considered irrelevant (Cohen (1977), Statistical power analysis for the behavioral sciences, NY: Academic Press).

additional background variables, for example information about yearly income and financial property from tax authorities. Moreover, in the future, linkage may be used to follow transitions in employment and age of retirement for participants after data collection for this study is completed.

Of the 15,118 participants who completed the baseline questionnaire, 13,216 could successfully be linked to the base registration. Of all respondents, 1,446 (9.6%) did not give their consent for the linkage. Among the new respondents that were added to the cohort in 2015, 22.5% did not give their consent, but 3,716 could be successfully linked.

3 Questionnaires

3.1 Topics in the questionnaires

All questionnaires start with employment status. Participants may choose between nine categories varying from one paid job to housewife and are allowed to choose more than one option. This question is followed by one about received social benefits. Based on their answers to these questions, respondents are classified into employee, self-employed and not employed and they will receive the questions that are applicable to their work status.

3.1.1 *Demographic characteristics*

The following demographic characteristics were assessed:

- Year of birth;
- Sex;
- Level of education;
- Household composition.

Year of birth, sex, and level of education are registered by Intomart GfK. They were also assessed by questionnaire to enable checks. To assess the composition of the household a similar question was asked as used by Statistics Netherlands.

3.1.2 *Health and well-being*

The following aspects of health and well-being were assessed:

- Longstanding diseases and limitations;
- Perceived general health and well-being;
- Lifestyle.

Longstanding diseases were assessed by presenting the participants a list with several health problems, and ask them if they suffered from one of them. Subsequently was asked if the health problem limits their performance at work. These questions were derived from a yearly survey among the working population by Statistics Netherlands, which were also used in the Netherlands Working Conditions Survey (NWCS) (4). From 2010 to 2013, four questions were included to assess musculoskeletal health problems. The questions were derived from the NWCS (4). Since 2015 these questions were removed.

Perceived health is assessed with 12 questions of the SF-12 (Short Form Health Survey) (5). The SF-12 is a short version of the SF-36 (Medical Outcomes Study 36-item Short-Form Health Survey) (6). To assess vitality, three items from the SF-36 were added (6). These items were not included in the SF-12. Since 2017 these questions were removed.

Depression was assessed with the CES-D10 (Center for Epidemiologic Studies Short Depression Scale) (7,8). This 10-item scale is a short form of the original CES-D 20, which contains 20 items. Till 2017, Recovery and relaxation was measured with three items derived from the DISC-R version 3 (9). Participants report to what extent after a workday they are still occupied by their work after a workday, are affected by events at work, and are able to relax. Since 2015, Burn-out is measured using five items, that are based on an adapted version of the Utrecht Burn-out Scale (10).

Several lifestyle aspects were assessed. Two questions refer to physical activity.

Other questions refer to height and weight to determine the Body Mass Index and one question is about smoking habits, now and in the past. Since 2015, participants were asked how many hours they sleep on average.

3.1.3 *Work-related factors*

The following work-related factors were assessed:

- Work transitions;
- Job characteristics;
- Work in the past;
- Working conditions;
- Support, justice and unwanted behaviour (bullying, intimidation, violence and sexual attention);
- Specific work characteristics for the self-employed;
- Work characteristics for multiple job holders.

Work transitions

With regard to transitions, the questionnaire contains the following items:

- Reasons to stop working;
- Reasons to start working;
- Changes of employer, job or profession;
- Reasons for these changes;
- Promotion and demotion;
- Changes in work tasks or working hours.

In 2017 two items are added for those not employed about when they stopped working and if they expect to start working again. These questions are meant to stop bothering participants who stopped some time ago or who retired permanently with questions about their reasons. Before 2015, employees who started to work as a self-employed or vice versa were asked for their reasons to change. However, since these respondents could only be identified through a complicated routing, these questions were removed. Questions with regard to factors important for switching jobs, profession or employer remained. After 2015, questions on intentions or needs about their further career were removed.

Job characteristics

Questions concerning the job refer to:

- Occupation;
- Type of industry;
- Size of the company.
- Type of contract;
- Number of working hours, work in days/week, overtime;
- Evening and night work, weekend work;
- Flexible working arrangements;
- Management tasks;
- Restructuring or reorganisation.

Questions on job characteristics, such as occupation, type of industry, type of contract, working hours etc., were similar to those used in the NWCS (4).

In 2015, the question on contract type was replaced by three questions that together determine the type of contract of a participant. However in 2017, due to lack of space, the three questions were removed in favour of the original question on contract type. After the question with regard to evening and night work, a new question was added in the follow up questionnaires on working between 12.00 p.m. and 6.00 a.m. In 2015, a question on working weekends was added. In 2015, three questions were included referring to flexible working arrangements. Participants were asked whether they can partly determine their own working hours, whether it is possible for them to work from their home and whether they regularly work from home. Also, two questions were added asking participants whether they are available for colleagues or customers outside working hours.

Work in the past

All participants who filled in the questionnaire for the first time (in 2010 and 2015) were asked questions about their work in the past. These questions refer to the number of years and the type of work (physically, emotionally and mentally demanding work). Participants without paid work were asked questions about their last job. These questions refer to job title, sector, type of contract and years of employment. Self-employed were asked how long they were working as a self-employed and their work status before they became self-employed.

Working conditions

With regard to working conditions, exposure was assessed to noise, solvents, physical work load, job demands, job autonomy, emotional demands and mental demands. Questions on demands and autonomy were derived from the Job Content Questionnaire (JCQ) (11). Emotional demands were assessed with the Copenhagen Psychosocial Questionnaire (COPSOQ) (12), but answer scales were adapted to fit in with the other questions. Questions on physical work load, noise and mental demands were derived from the NWCS (4).

Starting in 2015, a question was asked whether changes had taken place in the previous five years (2015) or in the previous twelve months (since 2016) in the work place. This question was derived from the European Skills and Jobs Survey (13). Starting in 2019, questions were added on the use of electronic communication, digital systems and whether participants have trouble dealing with it.

Support, justice and unwanted behaviour (bullying, intimidation, violence and sexual attention)

Social support was assessed with the COPSOQ (12), with adapted answer scales. Questions with regard to procedural and distributive justice were based on a previous study by Boer et al (14). After 2013, the questions on justice were removed. In 2015, the questions on bullying, intimidation, physical violence and unwanted sexual attention were adapted to specify the type of situation.

Specific work characteristics for self-employed

The work characteristics for self-employed persons are sometimes different than of those who work as an employee. Therefore, for this group questions were added with regard to the management of the enterprise (alone or with others), personnel, number of clients/customers, change in demand for services or products, cooperation with other entrepreneurs and questions about typical issues for entrepreneurs, such as insecurity, lack of collective arrangements etc. The questions were newly constructed and partly based on a study by Van den Born on the challenges of being an entrepreneur (15).

After 2013, several questions were removed: about their cooperation with others, troubles in finding new clients and questions about the negative aspects of working as an entrepreneur.

Work characteristics for multiple job holders

In the questionnaires of 2015, 2016 and 2017 we added questions about a second job, if a participant reported having multiple jobs. We asked participants how many jobs they had, and whether their second job was a job as an employee or as self-employed. Further, we repeated some questions that were asked for the first job, such as type of contract, working hours and some working conditions. Also, we asked for the main reason to have multiple jobs and whether they would prefer to have one job.

3.1.4 *Knowledge and skills*

New questions were constructed with regard to the fit between knowledge/skills and the job (or current labour market for the non-working) and knowledge obsolescence. Four questions refer to developmental proactivity and are based on a study by Van Veldhoven en Dorenbosch (16). One question asks if participants did attend training or educational activities in the past 12 months. The question on the focus of these training and educational activities was changed in 2015 into a question on the motivation for training and educational activities. In the 2010 questionnaire, one question was aimed at the payment for training or educational activities. For the follow up questionnaires this question was rephrased and is now aimed at the initiative for these activities.

3.1.5 *Social factors*

The following social factors were assessed:

- Volunteer work and informal care;
- Employment status partner;
- Support partner with regard work/retirement;
- Life events;
- Work-family balance.

All questionnaires contain questions on the amount of time spent on unpaid activities such as volunteer work or charity work, informal care, care for little children outside the family, and household work. Since 2012, some extra questions were added in the questionnaires with regard to informal care:

- Who was the person the informal care was aimed at?
- Where did this person live?
- What is the travel distance between this person and your home?

Starting in 2015, more questions were added concerning volunteer work and informal care:

- Type of organization the volunteer work was done for.
- To what extent this volunteer work was fun, satisfying, difficult, obligatory or stressful.
- Motives for doing volunteer work.
- To what extent giving informal care was fun, satisfying, difficult, obligatory or stressful.

Questions on the support of the partner concerning work or retirement were based on a study by Henkens et al (17). Questions on work-family balance were based on a study by Fox and Dwyer (18).

3.1.6 *Financial factors*

The questionnaire contains items on the contribution to the household income, the financial situation of the household, the financial situation of the company and the financial opportunity to stop working. Starting in 2015, a question was added that asked participants if they support one or more children financially.

3.1.7 *Motivation to work*

The following factors related to motivation were assessed:

- Importance of certain job characteristics (such as appreciation, salary etc.)
- Work engagement;
- Motivation (not) to work;
- Age till when participant would like to work (or would have liked to work);
- Job satisfaction;
- Desire to work more or less hours.

Questions on the importance of job characteristic and the motivation (not) to work, were only part of the questionnaire during the first four waves. These questions were partly based on the NWCS (4). Questions on motivation to work were derived from the questionnaire based on the Self Determination Theory (19). Work engagement is assessed by the Utrecht Work Engagement Scale (UWES) (20). The UWES-9 is used, in which the dimensions vigor and dedication are assessed. Questions on age till when the participant would like to work are based on the NWCS, as well as the question on job satisfaction (4).

3.1.8 *Ability to work*

The following items in the questionnaire are related to the ability to work:

- Work ability;
- Self-efficacy with regard to work;
- Self-efficacy with regard to new tasks;
- Age till when participant is able to continue working.

Originally, four questions of the Work Ability Index (WAI) (21,22) were included. After 2017, only the general question was retained. Questions on self-efficacy were newly constructed and based on the guidelines by Bandura (23). Most questions on self-efficacy were removed after 2013 and still more after 2017. The 2019 questionnaire only contains the question on the ability of the respondent to find a new employer in the next 12 months.

3.1.9 *Opportunity to work*

The following factors related to opportunity to work were assessed:

- Arrangements in the company;
- Social support and norms about continue working;
- Age discrimination;
- Opportunity to work;
- Circumstances under which participants would be prepared to work;
- What is needed to perform well in a new job.

Questions about arrangements in the company (to facilitate employability or to facilitate retirement) were partly based on the Netherlands Employer Work Survey (NEWS) (24). Questions on norms and support from colleagues about continue working were based on a study by Henkens et al (17). Three items on Age Discrimination were derived from the Nordic Age Discrimination Scale (25). A fourth item was added, as was also done in the German LidA study.

3.1.10 Productivity

Till 2017, the questionnaire contained several questions to assess productivity. First, Productivity at work is assessed with a question on the quantity of work in the last four weeks compared to usual and a question asking for reasons if this was less than usual. These questions were based on the Quantity and Quality questionnaire (QQ) (26). From 2011 to 2012 another two questions were added based on the study of Koopmans et al (27) in which questionnaires assessing work performance were reviewed. These questions were removed in 2015. The productivity measure still present in the questionnaire is Productivity loss caused by health problems, i.e. presenteeism, which is assessed with three questions based on the Short Form Health and Labour Questionnaire (28).

Sick leave was assessed by four questions which were derived from the NWCS (4). The first question refers to sick leave in the past 12 months (yes/no), the second one to the frequency, the third one to the number of days in the past 12 months, and the last one to the number of days in the past four weeks.

Note: regarding the question on how many days a participant was absent in the past 12 months due to sickness (E22), an error was made during data collection for the fifth wave. Instead of allowing for an answer up to 365 days, like in previous waves, a maximum of 30 days was programmed. In total 745 participants filled in 30 days. We assumed that participants that were longer on sick leave would fill in “30”. To verify this assumption we checked if the percentage of persons with missing data as well as the distribution of the values between 0 and 30 was similar to previous waves. As this was the case, we approached the participants who filled in 30 days again in March 2016 and asked them the question again:

*About how many days, in total, have you been on sick leave in the past 12 months?
Could you please take as a reference the 12 months before you participated in the STREAM study in the fall of 2015. If this is too difficult, please take the whole year 2015 as a reference. (Only count days you would normally work. Also include partial sick leave and work as part of a work rehabilitation program).*

Of the 745 participants that were approached again, 611 (82%) responded. The variable EE25 was recoded using this new value, also when the new value was smaller than 30.

3.1.11 Personality traits

Mastery

Mastery may be defined as the feeling to which a person perceives himself to be in control of events. It is assessed with the Pearlin Mastery Scale (29).

3.1.12 Coping

To measure coping style, 9 items of the Utrecht Coping List were used (30). Three coping styles can be distinguished:

- Active;
- Avoiding;
- Support seeking.

In 2011, these items were added to the questionnaire.

3.2 Overview of topics

Table 3.1 contains all topics of the questionnaire, including the question numbers and, if applicable, the source of the question.

Table 3.1: Topics in the STREAM 2019 questionnaire. Topics or questions in grey are not present in the 2019 wave, but are available for one or more other waves.

Concept	Question	Source ¹

Sick leave	E23-E25A	-
Personality traits		
Mastery	H37-H43	Pearlin Mastery Scale (29)
Coping	H48A-H48I	UCL (30)

¹ The wording of the questions or the answer categories differ from the questions the source refers to.

² In 2012 and 2013, the participants who did not participate in the previous measurement were asked these questions twice; once with regard to the past twelve months and once with regard to the twelve months before that. The corresponding question numbers are J03-J07.

3.3 Scales

Table 3.2 shows the scales used in STREAM, the items they are based on and the internal consistency of the scales as measured with Cronbach's alphas. The internal consistency is considered good if Cronbach's alphas are higher than 0.8, and considered acceptable between 0.7 and 0.8. However, opinions diverge on the acceptability of ranges. Moreover, the

alpha is dependent on the items in a scale. A great number of items will inflate the value of the alpha (31).

Table 3.2: Scales in STREAM and their Cronbach's alphas

	Cronbach's alpha
Health and well-being	
<i>Physical and mental health (SF-12)²</i>	.89
H01 Health in general	
H02 Limited in moderate activities	
H03 Limited in climbing several flights of stairs	
H04 Accomplished less than you would like	
H05 Were limited in the kind of work or other activities	
H06 Accomplished less than you would like	
H07 Didn't do work or other activities as carefully as usual	
H08 Interference with normal social activities	
H09 Interference with normal work	
During the past 4 weeks . . .	
H10 ...have you felt calm and peaceful?	
H11 ...did you have a lot of energy?	
H12 ...have you felt downhearted and blue?	
<i>Depression</i>	.85
<i>During the past week...</i>	
H16 ...I was bothered by things that don't usually bother me	
H17 ...I was bothered by things that don't usually bother me	
H18 ...I felt depressed	
H19 ...I felt that everything I did was an effort	
H20 ...I felt hopeful about the future	
H21 ...I felt fearful	
H22 ...my sleep was restless	
H23 ...I was happy	
H24 ...I felt lonely	
H25 ...I could not get going	
Work-related factors	
<i>Physical work load</i>	.87
C01 Using a lot of force (e.g. lifting, pushing, pulling)	
C02 Using tools etc. causing body vibration	
C03 Work in uncomfortable postures	
C04 Stand for long periods of time	
C05 Kneel or squat for long periods of time	

² Scales for physical and mental health are constructed by a weighted sum of the items of the SF12, based on US 1998 data. Cronbach's α in the table is based on the unweighted items.

	Cronbach's alpha
<i>Job demands</i>	.89
C10 Do you have to work very fast?	
C11 Do you have to do a lot of work?	
C12 Do you have to work extra hard?	
C13 Is your work hectic?	
<i>Job autonomy</i>	.80
C14 Able to decide for yourself how to do your work	
C15 Able to decide for yourself in which order	
C16 Able to influence the pace in which you work	
C17 Do you need to come up with solutions yourself	
C18 Able to take time off work when you want to	
<i>Mental demands</i>	.82
C19 Work requires you to think very hard?	
C20 Work requires that you keep your mind on your job	
C21 Work require a lot of your attention	
<i>Emotional demands</i>	.87
C22 Emotionally difficult situations	
C23 Emotionally demanding	
C24 Emotionally involved	
<i>Social support</i>	.83
C25 Help and support from your colleagues	
C26 Colleagues willing to listen to work-related problems	
C27 Help and support from your immediate superior	
C28 Superior willing to listen to work-related problems	
<i>Social support self-employed</i>	.81
C29 Help and support from colleagues/other entrepreneurs	
C30 Colleagues/other entrepreneurs willing to listen to work-related problems	
C31 Help and support from your customers or clients	
C32 Customers or clients willing to listen to work-related problems	
Knowledge and skills	
<i>Knowledge obsolescence (employed and self-employed)</i>	.64
D11 Using knowledge or skills insufficiently and forget them	
D12 Having knowledge and skills I no longer need	
D13 I lack "new" knowledge and skills	
<i>Knowledge obsolescence (not employed)</i>	.71
D15 Using knowledge or skills insufficiently and forget them	
D16 Having knowledge and skills no longer requested	
D17 I lack "new" knowledge and skills	
<i>Developmental proactivity</i>	.79
D22 In my work, I keep trying to learn new things	
D23 Think about doing a good job in the future	
D24 I search for people from whom I can learn something	
D25 I can cope with changes in my work	

Work engagement	.94
F21 At my work, I feel bursting with energy	
F22 At my job, I feel strong and vigorous	
F23 I am enthusiastic about my job	
F24 My job inspires me	
F25 When I get up in the morning, I feel like going to work	
F26 I am proud of the work that I do	
Age discrimination	.88
C49 Left out in cases of promotion or internal recruitment	
C50 No equal opportunities for training during work time	
C51 Less often new equipment, activities or working methods	
C52 Higher pressure to leave the company	
Mastery	.86
H37 Little control over things that happen to me	
H38 No way I can solve some of the problems I have	
H39 Little I can do to change important things in my life	
H40 I often feel helpless in dealing with the problems of life	
H41 Sometimes I feel that I'm being pushed around in life	
H42 What happens in the future mostly depends on me	
H43 I can do just about anything I really set my mind to do	
Coping	
<i>Avoiding</i>	.76
H48a Give in to avoid difficult situations	
H48d Avoid difficult situations as much as possible	
H48g Try to withdraw from the situation	
<i>Active</i>	.79
H48b Look at a matter from every angle	
H48e Think up alternatives to solve a problem	
H48h Work purposely to solve a problem	
<i>Support seeking</i>	.72
H48c Express how you are feeling	
H48i Show something is bothering you	
H48f Seek comfort and understanding	

4 Results

The results of the eight measurement of STREAM are presented in Appendix 2 and 3. Appendix 2 contains the results of the separate questions as well as of the scales described in chapter 3, divided by age group (44-49, 50-54, 55-59, 60-64, 65-71), work status (employees, self-employed and non working) and sex. The numbers before the questions (e.g. HA01, HA01A etc.) refer to the variable names in the datafile. The indicator 'H' refers to the eight measurement. Appendix 3 contains the transitions in work status over the years of the persons who were employer, self-employed and non working at the first measurement. Self-evidently, new participants are not included in this table.

Geachte mevrouw De Wind,

De Medisch Ethische Toetsingscommissie VUmc adviseert in positieve zin omtrent de uitvoering van het onderzoek: "**Study on Transitions in Employment, Ability and Motivation (STREAM)**". Het onderzoek valt niet onder de WMO.

De goedkeuring, waartoe besloten is in de vergadering van d.d. 01-03-2012, is gebaseerd op de volgende documenten:

- TNO-rapport STREAM d.d. 05-04-2011
- Brief met toelichting onderzoek
- Begeleidende e-mail d.d. 15-02-2012

Met vriendelijke groet,
namens de METC VUmc,

Subject

'Study on Transitions in Employment, Ability and Motivation (STREAM)'

Background

On 14 November 2019 the research proposal 'Study on Transitions in Employment, Ability and Motivation (STREAM)' was submitted to the TNO Institutional Review Board (IRB). The composition of the IRB is specified on the TNO Intranet page 'Human Research'.

Advice

The IRB had considered the proposed research on the basis of its regulations and expresses a positive recommendation.

The advice is determined in accordance with the methodology that can be found on the TNO Intranet page 'Human Research'.

In its deliberations, the IRB has considered the research design and privacy aspects, in addition to – where relevant – the ethical aspects and the burden and the risks to the research participants.

In the event of important modifications to the research or in the event incidents occur, the project leader shall inform the IRB. This may lead to amended recommendations.

Sincerely,

On behalf of the IRB,

Pierre Valk,
Secretary Institutional Review Board TNO

Leiden, 20 December 2019

The Review Board has based its deliberations on the following submitted documents:

- Application form (14/11/2019)
- Research plan (09-/12/2019)
- Participant Information Form
- Notification /Certificate of Insurance
- Quick scan DPIA

· 6 Housewife, homemaker, studying [n=128]	1.2%▼	2.6%	6.8%▲	2.0%

Note, Percentages are column percentages, and are tested with the Pearson χ^2 -test (horizontal comparisons). The contrast is subgroup vs 'rest' (weighted deviation contrast), ▲ and ▼: p<0.05, significant high (low) percentages (two-tailed), and Cohen's d is at least 0.20. Open arrows Δ and ∇: also significant, but Cohen's d is smaller than 0.20. Cohen, J. (1988), Statistical power analysis for the behavioral sciences (2nd ed.), Hillsdale NJ: Erlbaum.
